Internet of things IoT. The Internet of Things (IoT) refers to the application of unique identifiers to physical objects that enables them to be connected to a network allowing the transfer of data to and from those objects. The ability to connect objects via the Internet has existed since the 1980's, and the phrase ' Internet of Things ' was first coined by Kevin Ashton in 1999 who wrote; 'If we had computers that knew everything there was to know about things - using data they gathered ...
