The covalent Bond-Why do atoms bond  
Atoms bond to gain stability within their electrons  
-In covalent substances, atoms share electrons to achieve this-  
Atoms are still trying to follow the octet rule

**Bonding** • covalent bond is a shared electron pair that connects the atoms in molecular (covalent) compounds • when two atoms get close enough, their electron clouds overlap, allowing the nucleus to attract the other atom's electrons which results in a net attraction between the two atoms • if atoms are too close together, they will repulse each other 8.2 Single Covalent Bonds and Lewis Structures • shared electron pairs occupy same shell as ...
