OpenGL's basic operation is to accept primitives such as points, lines and polygons,

# Access Free Computer Graphics Using Opengl

and convert them into pixels. This is done by a graphics pipeline known as the OpenGL state machine. Most OpenGL commands either issue primitives to the graphics pipeline, or configure how the pipeline

processes these primitives.

OpenGL (Open Graphics Library) is the computer industry's standard application program

# Access Free Computer Graphics Using OpenGL

interface ( API) for defining 2-D and 3-D graphic images. Prior to OpenGL, any company developing a graphical application typically had to rewrite the graphics part of it for each operating system platform

# Access Free Computer Graphics Using OpenGL

and had to be cognizant of the graphics hardware as well. With OpenGL, an application can create the same effects in any operating system using any OpenGL-adhering graphics adapter.

The main aim of the Traffic Signal Computer Graphics Mini Project is to illustrate the concepts and
