Solution 1. For this problem, it is important to recall the relation $E = -\nabla \cdot V$ where $\nabla = \frac{d}{dx} \hat{x} + \frac{d}{dy} \hat{y} + \frac{d}{dz} \hat{z}$ which, in one dimension, can be rewritten $E = -\frac{dV}{dx}$ or without the vector notation $E = -\frac{dV}{dx}$. We are given a graph of the electric field and asked to find the potential.

Homework 3 - Solutions. Note: Each part of each problem is worth 3 points and the homework is worth a total of 42 points. 1. State Space Representation to Transfer Function Find the transfer function $G(s) = Y(s)/R(s)$ for the following system represented in state space. $\dot{x} = \begin{bmatrix} 2 & 6 & 4 & 0 & 1 & 0 & 0 & 0 \\ 1 & 3 & 2 & 5 & 3 & 7 & 5 & x \end{bmatrix} + \begin{bmatrix} 2 & 6 & 4 & 0 & 0 & 10 & 3 & 7 & 5 \end{bmatrix} r$
 $y = \begin{bmatrix} h & 1 & 0 & 0 & i & x \end{bmatrix} x$ Solution: Using the formula $G(s) = C(sI - A)^{-1}B$, we can solve for the transfer function as follows: $(sI - A)^{-1} = \frac{1}{s^3 + 5s^2 + 2s + 3} \begin{bmatrix} 2 & 6 & 4 & s^2 + 5s + 2 & s + 5 & 1 & 3 & s^2 + 5s \dots \end{bmatrix}$
