More than twenty years have passed since Walter Auffenberg's monumental *The Behavioral Ecology of the Komodo Monitor*. In the intervening years the populations of Komodo dragons—native only to a handful of islands in southeast Indonesia—have dwindled, sparking intensive conservation efforts. During the last two decades new information about these formidable predators has emerged, and the most important findings are clearly presented here. A memoir from Walter Auffenberg and his son Kurt is followed by the latest information on Komodo dragon biology, ecology, population distribution, and behavior. The second part of the book is dedicated to step-by-step management and conservation techniques, both for wild and captive dragons. This successful model is a useful template for the conservation of other endangered species as well, for, as Kurt and Walter Auffenberg note, " The species may well indeed survive in the wild for generations to come while countless other organisms are lost. "

June 11, 1940 – where is Winston Churchill?

It's one month after their wedding, and the future looks bright for Judge Deborah Knott and Sheriff Deputy Dwight Bryant--until a disturbing call from Dwight's 8-year-old son Cal calls him back to Virginia. When he arrives, he is shocked to find that his ex-wife has left the boy alone for almost 24 hours. Worse, as Dwight tries to confront her, she takes the child and leaves town without a word. As Dwight embarks on an all-points search, Deborah hurries to his side. But will they be able to work together to decipher the ex-wife's motives--and, more importantly, will they find young Cal before he comes to harm?

Retells the stories of the prophets, in graphic novel format.

The *Color Teil* chronicles Teil Duncan's artistic journey, displaying over three hundred full-color images of her work. Her studies range from figure drawings and animals to beach and pool scenes. Inspiration comes in all sizes and shapes for Teil. She attributes her artistic talent and motivation largely to her Christian faith, which, while she lost touch with it during her young adult years, she now thrives within. Her walk with Jesus is Teil's top priority. Throughout this book, readers will become better acquainted with both the artist, as a person, and the art she creates. It is a vibrant, colorful journey that can only be described as: *The Color Teil*.

A collection of poems for young readers about soccer.

A guide to the DSST exams, which are taken to receive college credit, reviews verbal, clerical, math and memory skills; offers test-taking tips; and provides full-length practice tests for such exams as: Introduction to World Religions, Principles of Finance, Criminal Justice, Fundamentals of College Algebra and more. This book is dedicated to Aristed Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristed Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been customarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the interest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L. Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.
