Triant Flouris is a prominent academic and administrator in aviation management education; Dennis Lock has more than forty years experience in practising, lecturing and writing about project management. When these two experts combined their considerable talents to write their earlier book *Aviation Project Management*, it was little wonder that distinguished reviewers gave generous praise and acclaimed it as a welcome addition to what, until then, had been a neglected field. That first title was structured as an essential primer for managers and students. The authors have now written this more in-depth book for managers and students who need to study aviation project management in much greater detail, as well as critically connect project management within an aviation context to prudent business decision-making. *Aviation project management* is described in considerable detail throughout all stages of a lifecycle that begins when the project is only a vague concept and does not end until the project has been successfully completed, fully documented, and put into operational service. *Aviation projects* have commonly failed to deliver their expected outcomes on time and have greatly exceeded their intended budgets. Many of those failures would have been prevented if the project managers had adhered to the sound principles of project management, as described and demonstrated throughout this book.

Combining the considerable respective expertise of Triant Flouris and Dennis Lock, this unique book highlights the ways that successful businesses are managed in the aviation industry through the identification and application of proven project management methods. Theoretical concepts are defined, clarified and shown how they can be valuable to business managers and students of the aviation business sector. *Aviation Project Management* builds on the successful and popular work of Dennis Lock but is considerably enhanced by applications, examples, illustrations and case examples pertaining to projects exclusively from the aviation industry. Theory in the project management field is already well evolved, so the purpose of this book is not to review that theory but rather to demonstrate how the lessons of theory can be of practical use to aviation students and business managers. It provides a practical guide to those interested in how projects are managed and the common mistakes that aviation project managers should avoid.

Air Transportation: A Management Perspective by John Wensveen is a proven textbook that offers a comprehensive introduction to the theory and practice of air transportation management. In addition to explaining the fundamentals, the book transports the reader to the leading edge of the discipline, using past and present trends to forecast future challenges and opportunities the industry may face, encouraging the reader to really think about the decisions a manager implements. Written in an easy-to-read, easy-to-understand style, the Eighth Edition modernizes the text focusing on newly emerging management trends, innovative technology, and an increased emphasis on global changes in the industry that will change the future of aviation. New and updated material has been added throughout the text including mini case examples and supplemental presentation materials for each chapter. *Air Transportation: A Management Perspective* is suitable for almost all aviation programs that feature business and management. Its student-friendly structure and style make it highly suitable for modular courses and distance-learning programs, or for self-directed study and continuing personal professional development.
