The Soviet space program was the national space program of the Union
of Soviet Socialist Republics, active from the 1950s until the state's
collapse in 1991. The Soviet space program was mainly based on the
human spaceflight program and the development of the expendable launch
vehicles, which had been split between many design bureaux competing
against each other. Over its 60 years of history, the Soviet space
program was responsible for a number of major firsts in human
spaceflight, including t

The Soviet space program faced interesting times as Union began to
crumble in the late 1980s and early 1990s. Instead of the Soviet space
agency, Mir and its Soviet cosmonauts (who became Russian citizens
when the country changed) came under the aegis of Roscosmos, the newly
formed Russian space agency. Many of the design bureaus that had
dominated space and aerospace design were either shut down or
reconstituted as private corporations.

Russia's space agency, Roscosmos, is looking to develop new options for human spaceflight, according to its head Dmitry Rogozin. It wants to replace the current Soyuz MS with a winged space shuttle, similar to the 1980s Buran. The Buran ('blizzard' in Russian) was similar in design to the US space shuttle.

Less than three months after Kennedy's inauguration, on April 12, 1961, Soviet cosmonaut Yuri Gagarin became the first human to escape Earth's gravity. In the aftermath of his brief flight, the piloted component of the Soviet space program rapidly grew to become indisputably dominant over any other type of space activity.
