sugarcane mosaic virus - SlideShare

Sugarcane smut is disseminated via teliospores that are produced in the smut whip. These teliospores located either in the soil or on the plant, germinate in the presence of water. The primary transmission of the disease is through diseased seed pieces, while the secondary transmission is through windblown spores.

Sugarcane: Diseases and Symptoms — Vikaspedia

HISTORY OF DISEASE Red rot of sugarcane was first reported in 1893 from java (indonesia) The accepted name, 'Red rot' was given to this cane disease in 1906 by Sir E. J. Butler, the celebrated Imperial Mycologist of India, who was then working at Pusa, Bihar. The disease was first seen in India in 1901 near Godavari Delta of Andhra Pradesh, India. Epidemic in 1939 – 40 in east UP & Bihar In 1950 It has always damage a lot of sucrose content variety, coj 312, of sugarcane.

(PDF) Pokkah Boeng: An Emerging Disease of Sugarcane

Several pests affect sugarcane but, fortunately, there are only a few major pests that cause serious economic harm. Insect pests are usually grouped into four broad categories, namely Leaf Eaters, Leaf Suckers, Stem Borers and Soil Pests. SASRI advocates an Integrated Pest management (IPM) approach to suppressing insect pest levels.
